

## Illness

We understand that it is difficult for a family member to leave or miss work, but to protect other children; you may not bring a sick child to the center. The center has the right to refuse a child who appears ill. You will be called and asked to retrieve your child within 90 minutes if your child exhibits any of the following symptoms. This is not an all-inclusive list. We will try to keep your child comfortable but he/she will be excluded from all activities until you arrive.

- Illness that prevents your child from participating in activities.
- Illness that results in greater need for care than we can provide.
- Illness that poses a risk of spread of harmful diseases to others.
- Fever greater than 101 with no other symptoms or a fever less than 101 accompanied by other symptoms.
- Diarrhea – stools with blood or mucus, and/or uncontrolled, unformed stools that cannot be contained in a diaper/underwear or toilet.
- Vomiting – green or bloody, and/or more than 2 times during the previous 24 hours.
- Mouth sores caused by drooling.
- Rash with fever, unless a physician has determined it is not a communicable disease.
- Pink or red conjunctiva with white or yellow eye discharge, until on antibiotics for 24 hours.
- Impetigo, until 24 hours after treatment.
- Strep throat, until 24 hours after treatment.
- Head lice, until treatment and all nits are removed. WTG has a no nit policy. WTG staff will do a head check upon return (and sporadically) to verify there are no nits or lice present.
- Scabies, until 24 hours after treatment.
- Pinworms, until treatment
- Chickenpox, until all lesions have dried and crusted.
- Pertussis (Whooping Cough), until cleared by a physician to return.
- Has a physician or other health professionals written order that child be separated from other children.

Children who have been ill may return when:

- They are free of fever, vomiting and diarrhea for 24 hours with fever reducing medication.
- They are able to participate comfortably in all usual activities.
- They are free of open, oozing skin conditions and drooling (not related to teething) unless:
  - The child's physician signs a note stating that the child's condition is not contagious, and;
  - The involved areas can be covered by a bandage without seepage or drainage through the bandage.
- If a child had a reportable communicable disease, a physician's note stating that the child is no longer contagious and may return to our care is required.
